Java

```
public class Employee{
        String name;
        int age;
        Address resaddress;

              ...............
}

public class Address{
        String city;
        String state;
        String landmark;
        int pin;

              ...............

}
```

XML

```
<?xml version="1.0" encoding="UTF-8"?>
<employees>
  <employee>
    <name>Negan</name>
    <age>40</age>
    <email>imnegan@twd.com</email>
    <address>
      <city>Noida</city>
      <state>Uttar Pradesh</state>
      <pin>201301</pin>
      <landmark>Near hill top</landmark>
    </address>
  </employee>
</employees>
